

DATE: 6th February 2010.

EDITION: First.

ISSUE: One.

Scotland-United Kingdom.

LOCATION : Headquarters-Florida-United States of America.

DIVISION : Searl Magnetic (U.S.A.) INC. (pending)

SUBJECT : R&D energy and transportation systems.

AUTHOR : Prof. John Roy Robert Searl.

STATUS : Head of R&D in clean energy systems.

For many years now Searl has tried to set up research in the States for the purpose to develop clean energy and transport systems, in each effort agreements failed because the partners were being greedy where there are no needs for greedy action to be involved.

This planet on its own can meet your needs if you work as a team, add this you add to space and the whole universe is an open door, then why the greed, they must own it they must control it – WHY?

Surely working as one unit to create the means for a cleaner healthier planet in itself a rewarding effort to know that your family and your children have the best environment condition, then this pollution one which we endure today.

Now again I shall try to set up in the States, and trust that this time success will result that will spread across America to make it a leading green country of the world – only time will prove if that impossible task did successfully became reality.

If we all do our part then in 10 years time we would have given this planet a longer lifespan to the children of the future and a much better health state then we have at this time.

Your help to save this planet is now vital – what are you doing to help on this issue?

The first work team has been already selected and now wait with excitement for my arrival they have been busy to get my home ready for me to meet my needs. The goods from Thailand are already on root.

Morris in Scotland Helping Prof. Searl to trunk up the mock-up and test equipment to be ship ahead of his arrival in the States so it is there when I arrive, equipment is already on way from Thailand to the new site.

Prof. Searl packing mock-up and test equipment to ship to the States first Lab to be set up to show the S.E.G. effects and operation functions.

We are both coming soon to the States to set up my first laboratory for research and development of the Searl Effect Generator (S.E.G) as a clean operating generator for the requirement of energy for power and for transportation requirements within the United States of America. We shall see you soon and may the power be with you – God bless America.

This update been released by authority of:

Prof. John Roy Robert Searl head of research and development in clean energy and transportation systems; let us try to make America the green system as a show case to the world what one can do if we all work together to make it happen.

To all Americans I wish you a great 2010 let us see if we can make the impossible into the world of reality of possibilities for a better future.
