Dear Sir, Prince Charles,

11<sup>th</sup> September 2010

## **BRITISH ALTERNATIVE ENERGY INVENTOR PROFESSOR JOHN SEARL** ∞ "THE MAN WHO CAN SAVE THE PLANET" ∞

**I**t is my understanding, that you are genuinely and sincerely interested in the ecology of this beautiful planet of ours. In light of this, you may also have an interest in how the energy production element can be addressed. Perhaps without need of defacing the land with giant turbines, or polluting the air with noxious clouds, nor needing to strip rain forests, or further development of outmoded, potentially dangerous nuclear power stations, or the continual drilling for oil, with its stranglehold on the economy, and its own disastrous histories. I hope you will be intrigued and interested in something that will bring hope, jobs and new life, not only to the British Isles, but to the world; a remarkable device, that can truly save our planet.

**I**would like to introduce you to this wonderful English gentleman, now 78 years old, who, born in a workhouse, experienced a brutalised, and impoverished beginning, a lack of formal education, resulted from social attitudes to his seeming learning difficulties, which was in fact deafness, induced by trauma in babyhood, and so he was overlooked. However, this remarkable person was gifted and his life's work was inspired by two recurrent dreams repeated twice a year, between ages of four and ten, which at the time, terrified the child. These eventually, became the key to a mathematics that allowed him into the world of electro magnetism and a solution to the creation of an energy generator which would be powerful, clean, quiet, and free and which incredibly, proved to have health benefits as a side effect.

**I**t was in a poor, post war England, 1946, at the age of 14, that John Roy Robert Searl created his first generator, but miffed when it levitated, impaling itself in the ceiling, and it was so cold (going super conductive). When young John tried to peel it off the ceiling, his hands froze to it, only able to free himself when the landlady stuck a screwdriver into the device. In a second experiment John, determined his generator should not levitate, loaded the device with heavy lead, incredibly, this gave it more power, and it shot up through the ceiling, and out through the roof at a rate of knots never to be seen again, the effects of his generator made all of the radios in its vicinity turn on full blast, whilst the damaged roof rendered the house almost uninhabitable, and John a night or two in the local cells.

**T**his is just the beginning of the story of the SEG (Searl Effect Generator) and the IVG (Inverse Gravity Vehicle) that John demonstrated in, amongst other places, Warminster causing the area to become known as a hot spot for UFO activity. From 1963 until about 1978 John, with a team of volunteers, created his device, using the dreams decoded instructions, finding the most effective design a saucer shaped craft, which could go at right angles, stop instantly, it moves in its own vacuum, expressing a bright corona around it. John began experimenting by sending his craft ever greater distances.

**U**sing ham operators all over the country facilitated control of his device, which was flown to New York or Sydney in just 30 minutes, and as John says, the Space station is just a bus ride away for the SEG, the moon, an hour, and there is more.... It can neutralise nuclear waste, or radiation, it would quell devastating forest fires, saving lives, property and land. It has no carbon footprint, takes nothing from the environment, it simply converts the ambient energy making it coherent and focuses it, and then there is that unexpected side effect, which John came to know through his own experience in a terrible accident, an explosion, which set his whole face, eyelids, neck and head alight. However, within three weeks there were NO burn scars, and in a further week, none on the neck either, and he retained his sight. Pain was

gone in minutes, with no recurrence. This is because the SEG throws off negative ions in abundance which has a healing effect on the body, and cleans the environment, forcing dust, germs and viruses to fall to the ground, so we'd have a none dusty home to live in and healthier, happier bodies, and a new medical resource.

**H**aving met Professor Searl (an honorary bestowing from a German university) at the Leeds Exopolitical Conference at the beginning of August, along with the American film maker, Bradley Lockerman, who has made an excellent, award winning documentary about the man and his machines, (THE JOHN SEARL STORY 2009) and Searl engineer, Fernando Morris, I can attest to the fact that the Professor has no evidence of scarring on his face or neck. This is a truly remarkable device, and the only thing needed to make Professor John Searl's SEG and IVG a reality is funding and a drop in the ocean at that these days.

**I** believe the planet and its people are ready for the next phase of our development and experience; that of true alternative energy, made available for the first time to the public, which would solve a million and one problems in one fell swoop. That this type of technology has been kept from the public since the early 1900's, when Nikola Tesla in the US, developed similar concepts, is an indictment of the mindset of the ruling elite, and it is time for a change. Professor Searl's invention is not the only alternative energy device out there, but I believe there are none that also create such an abundance of alternative uses as a by product, and whose concept has been so thoroughly tested and concept proved over the last six decades.

**I** hope you find this letter of interest, and that it might motivate you to want to meet Professor Searl, see the documentary ([www.johnsearlstory.com](http://www.johnsearlstory.com)), and perhaps lend your voice to the move for development and investment in this remarkable system, sooner than later. His websites are a good portal, containing a great deal of information; [www.searlsolution.com](http://www.searlsolution.com) and [www.swallowcommand.com](http://www.swallowcommand.com). There is a growing movement seeking to raise awareness of Professor Searl's work that is gaining momentum, and it would be wonderful, if that could happen here in the UK first, a home grown invention, and an Englishman. What a coup if Britain were to get behind this man, get the funding, get a prototype up and running, and be the leader in the field, and the world. Commercial production could be achieved within two short years.....Otherwise, it looks like the Americans are wide awake to his existence and at the July 'Tesla Tech Conference' in New Mexico, he and his demonstrations were the main attractions, with standing ovations. It's interesting to think that John Searl was already looking at the creation of manned craft in 1968; the technology used to send the men to the moon was already outmoded by then, and has not been developed since, at least not in the public arena.

If you are interested in discussing Professor Searl's work further, or would like to meet with him I can help to arrange that and there are of course contact details on the websites. I would like to thank you for your time and attention, and look forward to your response, and I would also ask that you please add your vote to the site below which will help the planetary ecology so much via the '**Ecomagination Challenge**,' which is a \$200 million fund to bring together the world's best innovative ideas, to change world energy systems for the better, entries will be assessed for potential funding. YOUR vote will count hugely, as you might imagine, please get behind this amazing British Inventor and his work. <http://challenge.ecomagination.com/ideas>

Yours sincerely,

JOANNE SUMMERSCALES
