This is a rough layout of what this international Company has to study and defined precisely the best operational functions for its market objectives.

This massive task has commenced and the web will be setting up the Business section, which shall contain the various company sections, and the documents relating to the section list.

By clicking on the button of any part of the company, you will produce buttons listing what documents are available.

This document released by authority of:

Prof. John Roy Robert Searl Head of R&D.

SEARL INTERNATIONAL HUB is under development and some of the planning is presented here as an indication of our intensions.

An international complex such as being planned here in reference to energy, transport and space on a commercial base is a major task; it is without doubt, a League of Nations to work together to solve our energy and transport problems that has never been attempted before.

Yes, it is easy to say IMPOSSIBLE then everything you process was impossible, strange you have one clearly, the IMPOSSIBLE can become possible with the right leadership in charge.

I trust that I shall prove to be that right leader in this attempt to undertake the impossible and make it possible – only time knows if I shall achieve success or not.

Regardless which way it goes we have all learnt something positive from this effort, which in turn make it more easy for the next leader to succeed.

It is not the question whether we win or lose, but what we learn as we go we put to good use for the benefit of this planet and you. To that aim I am determine to make that attempt to succeed regardless of all that hate campaign on YouTube by you know who.
