

SEARL INTERNATIONAL SPACE RESEARCH CONSORTIUM.

INVITATION TO ALL COMPANIES.

Plans are going ahead to prepare a 10 hour lecture, in which companies who feel that they have machinery to manufacture the material rings for the S.E.G. or for the I-G-V construction, on a mass production basis, or test equipment that will cover the testing side of both the research and production side; or for the flight side such as communication that would like to set up their stand doing live action demonstration which will interface with the lecture; which has not been done before to my knowledge are welcome to make request via e mail to book space which will accommodate their needs.

Ham operators who would like to have a stand to perform functions in co-operation with the lecture are also welcome; this offer goes to websites as well.

Following an exhilarating event on the websites which is successfully guaranteed the future of the Searl Technology status for the years to come. I sincerely hope that you will enjoy joining this effort and support that one special day to create the future for our children and this planet which needs our help so urgency

For all participants and visitors there will be a friendly and welcoming and hospitality teams to ensure that you have everything you need to enjoy your ultimate day out experience.

Together we can move mountains – the future is just around the corner – and you can make it come to you – together we can give our children a future that is bright; please do not let them down – for there are no other option available for them or this planet – its in your hands to save it – together we shall try at lease to save it.

My sincere thanks to all of you and may the power go with you to day and for forever.

Prof. John Roy Robert Searl.
